

1. AI Founder Orchestration System

This is essentially a collection of AI employees.

Vision

One platform where a founder can:

- Validate idea
 - Plan product
 - Research market
 - Generate content
 - Create tasks
-

User Flow

Founder enters

Build AI-powered fitness coach

Startup Advisor Agent

Validates idea.

Market Research Agent

Researches:

- TAM
 - Competitors
 - Trends
-

Product Manager Agent

Creates:

- PRD
 - User Stories
 - Roadmap
-

Software Architect Agent

Creates:

- DB schema
 - APIs
 - System design
-

Engineering Manager Agent

Creates:

- GitHub Issues
 - Sprint Plan
-

Marketing Agent

Creates:

- Landing page copy
 - LinkedIn post
 - Email campaign
-

Multi-Agent Architecture

Founder Input

Orchestrator Agent

- Startup Advisor
- Market Research
- Product Manager
- Architect
- Engineering Manager
- Marketing Agent

Tools

Search Tool

Research

GitHub Tool

Generate issues

Notion Tool

Generate docs

PDF Tool

Generate reports

File Tool

Upload:

- business plans
 - competitor reports
 - PRDs
-

Memory

Store:

```
{  
  "startupName": "",
```

```
"idea": "",  
"roadmaps": [],  
"documents": []  
}
```

2. AI Startup Co-Founder

Vision

An AI system that acts like a startup advisor and helps founders validate ideas, analyze markets, create business plans, and generate execution roadmaps.

Problem Statement

Most founders struggle with:

- Validating ideas
 - Understanding competitors
 - Defining MVP scope
 - Creating execution plans
 - Building investor decks
-

User Flow

Step 1

User enters:

Idea:

AI-powered grocery delivery platform

Target Market:
India

or uploads a startup concept PDF.

Step 2

Research Agent performs:

- Market analysis
 - Competitor discovery
 - Industry trends
-

Step 3

Business Agent generates:

- Problem statement
 - Value proposition
 - Revenue model
 - SWOT analysis
-

Step 4

Planning Agent generates:

- MVP features
 - Product roadmap
 - Team requirements
 - Timeline
-

Step 5

Pitch Agent generates:

- Investor pitch deck
- Executive summary PDF

Agents

Research Agent

Responsibilities:

- Web search
- Competitor discovery
- Trend analysis

Tools:

- Tavily
- Search APIs

Output:

```
{  
  "marketSize": "...",  
  "competitors": [],  
  "trends": []  
}
```

Business Agent

Input:

Research results

Output:

```
{  
  "valueProposition": "",  
  "revenueModel": "",  
  "swot": {}  
}
```

Product Strategy Agent

Output:

```
{
  "mvpFeatures": [],
  "timeline": [],
  "teamStructure": []
}
```

Pitch Deck Agent

Generates:

- PPT
 - PDF
 - Investor summary
-

Technical Requirements

Frontend

- Next.js
- AI SDK
- Streaming UI
- File Upload

Backend

- LangGraph
- OpenAI/Gemini
- MongoDB

Memory

Store:

- startup ideas
 - previous analyses
 - generated reports
-

Deliverables

- PDF Business Plan
 - SWOT Report
 - MVP Roadmap
 - Pitch Deck
-

3. AI Interview Coach

Vision

A personal AI interviewer that remembers strengths and weaknesses and adapts future interviews.

Problem

Most interview platforms:

- Ask generic questions
 - Forget previous attempts
 - Don't provide learning plans
-

User Flow

Upload Resume

resume.pdf

Resume Agent

Extract:

- Skills
 - Experience
 - Projects
-

Interview Agent

Generates:

- Technical questions
 - Behavioral questions
 - Company-specific questions
-

User Answers

Voice or text.

Evaluation Agent

Scores:

```
{  
  "communication": 7,  
  "technical": 8,  
  "confidence": 6  
}
```

Learning Agent

Creates:

```
{  
  "weakAreas": [  
    "System Design",  
    "Redis"  
  ],  
  "studyPlan": []  
}
```

Agents

Resume Analyzer

Parses resume.

Interview Agent

Creates interview session.

Evaluation Agent

Evaluates responses.

Learning Agent

Creates personalized roadmap.

Memory

Store:

```
{  
  "interviews": [],  
  "weaknesses": [],  
  "strengths": []  
}
```

Future interviews become adaptive.

Stretch Features

Voice Interview

Pipeline:

Speech

→

STT

→

LLM

→

TTS

Coding Interview

User writes code.

Agent:

- executes tests
 - reviews code
 - provides feedback
-

Recommended Stack

Frontend

- **Next.js 15** (App Router)
 - **TypeScript**
 - **Tailwind CSS**
 - **shadcn/ui**
 - **Vercel AI SDK** (streaming responses)
-

Backend

- Next.js API Routes
- LangGraph
- LangChain
- MongoDB (Database)
